Dear Janet and Edward,

Thank you so much for the help with my computer. It is working flawlessly on line including wifi at Zeitgeist. In fact it has lost the habit of giving me a box after every screen change telling me to send the error message to Microsoft. And I always did, because it was the only way to get rid of it, and then I lost the screen and/or my connection. And in spite of sending the message thousands of times a squad of Geeks carrying attaché' cases never showed up at my door.

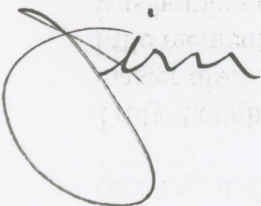

Truly though, getting rid of that error message was the reason I finally re-copied my two master discs... and in spite of all the trouble it caused me getting back on line, and all the little mementos I lost, I didn't get rid of it and I remember it coming up once when Janet was helping me at your place earlier in the month.

Well, it's gone now. What ever Edward did it got rid of the error message and I can now open enclosures - something else I couldn't do before because the error message would disconnect me. So anyway it really is better then ever.

It was timely that I got back on line too as there are a number of contacts with officials, family and friends regarding Will Lund's death. Sort of what best friends do. Turns out Will was in the hospital two days and signed himself out against all medical advice. He returned to his rented room and died in bed the next morning. Because of the hospital paperwork there won't be an autopsy. His sister in Texas is paying for cremation and his ashes go to the veteran's cemetery on Maui. There is still his stuff to deal with in eastern Washington.

Next time I come over I promise to not bring my laptop. I'm going to snail-mail this to you just to show off what a good job the printer does now that I have the right cable.

All best,

A handwritten signature in dark ink, appearing to be "Jim", with a large, looping flourish at the end.
