Dear Nicola,

Maybe I missed something but I didn't know you needed anything else from me. And I don't know what a *100 word biogs* is. (?!?)

My PowerPoint, which runs about 30 minuets, is on Microsoft Office's PowerPoint program and it is a PC program and does have three short video clips embedded in it. I plan to bring my PC laptop to run it with the same program on a backup memory stick. What I will need is a projector that is PC compatible or will accept my memory stick with the Microsoft PC PowerPoint program on it. As an aside I am so glad my friends Janet and Edward Galore will be in the audience as they are computer masters and will be there to help if I have questions about getting my program to run on RSA's equipment.

The current sculpture project that will highlight and close my program I have been calling: *U = Pu*. As to a title to my talk *Nuclear Process* might be more informative. Suit yourself on what to title it. You could call it *ten years after ATOMIC*.

Oh yes, one thing I will need is a plug adapter from my USA plug to your UK outlet. I am told my computer transformer is compatible with your power.

So if there is anything else you need from me let me know Nicola. Otherwise I'll see you Thursday or Friday and, of course, I do want to see the exhibit.

Everything best,

Jim
